40 SERIES LIFT KIT INSTRUCTIONS

SPRINGS: The front springs have 6 leafs. The rear springs have 5 leafs. Both front and rear springs are positioned on the vehicle as follows: Measure the length from the center pin to each end of the spring. The end with the long dimension attaches to the shackle.

SHOCKS: Extend the shocks to their longest point. The 2 long shocks install in the rear. The 2 short shocks install in the front. These shocks are designed to be installed with the rod pointing up, and the body pointing down.

SHIMS: There are 2 sets of shims, 4 degree for the front and 2 1/2 degree for the rear. The shims install with the fat portion of the shim pointing forward.
